

repo	
repo/uri	uri-like from remote origin
repo/commits	●

commit	
git/type	:commit
git/sha	
commit/parents	●
commit/message	
commit/author	●
commit/authoredAt	
commit/committer	●
commit/committedAt	
commit/tree (root)	●

email	
email/address	

file	
git/type	:blob
git/sha	

tx	import
db/id	
db/txInstant	
tx/commit (about)	●
tx/op	:import

tree node	
node/object (what)	●
node/filename (segment) (where in tree)	●
node/paths (path)	●

tx	analyze
db/id	
db/txInstant	
tx/file (about)	●
tx/op	:analyze, :schema
tx/analyzer	e.g. :clj, :java
tx/analyzerRev	long

codeq	
codeq/file (root)	●
codeq/loc (where in file)	"line col endline endcol", 1-based
codeq/parent (opt)	●
codeq/code (what)	●
analyzer-scoped/attrs clj/def, clj/use, clj/doc etc	
(when clj/def) clj/defop	def, defn, defmulti, deftype, defprotocol...

code segment	
code/sha	of whitespace-minified code: consecutive ws becomes single space, then trim
code/text	will lose ws-diffs, first wins

codename	
code/name	varname, classname, methodname (+sig)
tutorials, examples, tags, see-also, comments, notes, links etc	

tree	
git/type	:tree
git/sha	
tree/nodes	●

filename	
file/name	

codeq schema

one tx per commit

one tx per file/analysis
